

Mini Greenhouse

Make your own mini-greenhouse to grow plants!

You'll need:

glass jar and lid
soil/potting mix
seed/seedling

water
paint (optional)
paintbrush (optional)

Put some soil in your glass jar. It should take up about 1/3 of the jar height.

With a small stick, make a small hole in the centre of the soil.

Place your seed or seedling in the hole you've created and gently pat down the soil with the stick.

Give your seed/seedling some water. The soil should be damp but not soaked!

Put the lid on the jar and place the jar in a semi-sunny spot.

Remember to give your seed/seedling some water every couple of days.

Feeling creative? Paint the outside of your jar.

Or make greenhouses of different sizes!
